

LOUISIANA SUMMARY

AGRICULTURE & NATURAL RESOURCES

2019

Agriculture: Backbone of Louisiana's Economy

This publication tabulates the value of Louisiana agriculture in 2019. Agents and specialists of the Louisiana Cooperative Extension Service, as well as other agencies — both private and public — compiled the data. Their analyses focus on the animal, forestry, fisheries, plant and wildlife commodities that constitute our vital agricultural industry. Agricultural and natural resource industries contribute significantly to our state's economy with the potential for increased economic benefits and job creation through value-added processing in urban and rural communities throughout Louisiana.

The 2019 growing and harvest season was a struggle for most producers. Wet conditions in the spring and during planting along with high river levels caused difficulty for many commodities and either forced acreage to be shifted to other commodities or totally left unplanted. The difficult start to the growing season along with intermittent wet weather throughout the production and harvest seasons resulted in most of the state's major row crop commodities experiencing lower yields in 2019 as compared to the previous year. Per acre yields were down for corn, grain sorghum, rice, soybeans and sugarcane. In addition to lower yields, soybean acres were markedly lower in 2019, falling below 1 million acres for the first time in many years. Wet conditions and flooding at planting and early in the production year forced many acres to be lost or simply left unplanted. For sugarcane, adverse weather conditions in 2019 only helped to further the damage that was caused to the stubble crop from the extremely wet harvest in 2018. While cotton yields were up in 2019, they were only up marginally as wet, and unfavorable conditions in 2019 likely limited the potential of that crop as well.

In addition to the production difficulties experienced in 2019, producers also faced an uncertain market environment. Trade disputes and tougher trade policies helped to create a great deal of volatility in commodity markets. Significant slowdowns in export sales were experienced for most row crop commodities and some livestock commodities. Despite relatively strong and stable domestic demand during 2019, the uncertainty regarding trade and trade policy did slowly start to impact commodity prices. For the 2019 calendar year, sharp declines were experienced for cotton, soybeans, rice, wheat and grain sorghum. Corn prices during the 2019 calendar year were able to remain mostly unchanged from the previous year, but this was primarily a function of lower overall production and supplies in the United States in 2019 and not a function of strong demand.

Prices in 2019 for the livestock sector were mixed. All cattle prices were lower in 2019 as disruptions in the cattle processing sector sent shock waves throughout the industry. So, despite generally favorable demand, slowdowns in processing and the movement of beef through marketing channels helped to push prices downward for all classes of beef cattle. Likewise, broiler prices and other poultry prices were generally marginally lower in 2019 as increases in overall production of those products helped to put downward pressure on prices. Conversely, improving supply dynamics for the dairy industry helped to push milk prices marginally higher. That, along with improving domestic and export demand for milk and other dairy products, helped to support prices. Prices for other livestock species (horses, sheep, goats and pigs) were also marginally higher in 2019.

Prices for the fisheries and wildlife enterprises were also mixed in 2019. Prices for farm-raised crawfish were higher as demand continued to expand and outpace supplies. Other fishery prices that experienced increases in 2019 were oysters, menhaden and crabs. Prices for shrimp, farm-raised and wild-caught alligators, and freshwater and saltwater fish were all marginally lower in 2019. Continued issues over demand for alligators pressured prices during 2019, while increased competition from imported products continued to limit prices for shrimp and finfish. Finally, honey prices continued to increase in 2019, up marginally over the previous year. Increased interest in honey production and demand continues to provide strong fundamentals for this sector.

As is the case in most years, there are some commodities in 2019 that performed well both from a production and price standpoint and other commodities that faced significant challenges. This resulted in total gross farm values for different commodities and different commodity groups to vary significantly. Total gross farm value across all plant enterprises was down 6.41% from the previous year. Despite forestry values being up in 2019, lower yields and lower prices for much of the state's major row crop sector helped push total farm gate values down. Similarly, gross farm value across all fisheries and wildlife enterprises were down marginally, less than 1% from the previous year.

Despite lower prices for many of the fishery commodities, larger production levels helped to minimize the overall impact. Finally, the gross farm value across all livestock enterprises saw the largest decrease from the previous year, down over 10%. Lower prices for beef cattle and broiler production more than offset slight increases for some of the smaller animal enterprises in the state.

When the commodities produced by agricultural producers are cleaned, processed and packaged at the next stages of the marketing channel, these value-added activities create additional economic activity over and above that defined by the gross farm value. In 2019, these value-added activities were estimated to have an additional economic impact of \$5.2 billion. Taken together, the gross farm value and value-added activities were estimated to have a total economic impact of nearly \$11.2 billion. This represents a 4.37% decrease from 2018. Given the level of economic activity that the state's agriculture, forestry and fishery industries continue to generate each year, it is undeniable that they continue to be major contributors to the overall state's economy. Cutting-edge research programs and extension education and outreach efforts of the LSU AgCenter remain critical to sustaining these economic benefits.

Many Louisiana communities depend on agriculture, forestry, fisheries and wildlife for local jobs and their economic well-being. However, for those who work in it day in and day out, agriculture, forestry and fisheries are far more than a business, a major job contributor and an economic engine. It truly is a way of life. Families have lived on many of these farms, forest lands or fishing villages for generations following a preferred way of life even though it means hard work, many hours, high risk and sometimes low incomes.

Each new production season has risks associated with commodity prices, trade agreements and higher input costs as well as uncertainty related to the weather. These conditions make the discovery and adoption of new agricultural technology developed by the LSU AgCenter more important than ever to our state's producers. Agriculture is a highly sophisticated segment of the national and world economy, becoming increasingly so every year. That is the reason we at the LSU AgCenter continue to support agriculture and consumers with factual information provided by a well-trained faculty of extension agents, specialists and research scientists.

Those of us in the LSU AgCenter, with its major branches the Louisiana Cooperative Extension Service and the Louisiana Agricultural Experiment Station, are proud to be part of Louisiana's agricultural industry. We are committed to serving that industry and the citizens across the state of Louisiana in the years ahead.

Louisiana Summary

Agricultural and Natural Resources

2019

The statistical information in this summary was compiled from estimates made by extension agents of the LSU AgCenter after consulting with agricultural agency representatives, agricultural and agribusiness leaders, and others after study of various reports and resource materials. State specialists with the LSU AgCenter checked parish-level data for specific commodities to ensure accuracy and consistency of all production information. Final review of data was conducted by LSU AgCenter agricultural economist and project director Kurt Guidry in consultation with external sources, including state and federal statistical agencies. Any inquiries about the data in this publication should be directed to Kurt Guidry in the LSU AgCenter Department of Agricultural Economics. Guidry oversees the process of gathering all information for the Louisiana Summary.

Although this material is reasonably accurate and can be used for planning and other general informational purposes, this is not the official document of agricultural data for the state. Official statistical data are gathered, summarized and published by the U.S. Department of Agriculture's National Agricultural Statistics Service, Delta Regional Field Office, 10800 Financial Centre Parkway, Suite 110, Little Rock, Arkansas, 72211. Reproduction or publication of information in this summary should acknowledge the Louisiana Summary as the source but indicate the unofficial nature of the statistics.

The gross farm value was calculated for each commodity, which in some cases included a value from natural resources and consequently may not represent income to farmers. Gross farm values were calculated using calendar-year, market-weighted, state-level average prices when available. When state-level price information was unavailable, price information was used from adjacent states (Texas, Arkansas or Mississippi) or the nation. Primary sources for prices were: the USDA National Agricultural Statistics Service, USDA Agricultural Marketing Service and USDA Economic Research Service. The gross farm value is an indicator of the commodity's contribution to economic activity in the state but was not an indicator of farm profits. Production costs greatly affect profit (or loss) for all commodities. Even when gross income increases over previous years, corresponding increases in production costs may decrease farm profits.

In the state summaries, the value added in cleaning, processing, packaging, marketing and transporting commodities was an estimate of the total contribution of agriculture and natural resources to the state's economy. The state summary may not be an exact summation of all parish reports as adjustments may occur due to changes in average prices received or to accommodate information from other sources. In each parish table only commodities that were of commercial economic value in that parish this year were listed. In some instances, the number of producers or the number of acres in a parish were not available. An asterisk was used to avoid releasing confidential information when too few producers were present for that commodity. Within some commodity groups, such as grains, fruits and commercial vegetables, the total number of producers has been omitted because some producers grow several different crops within the group. Adding together the producers of individual crops would not give a true total for the group.

Animal Enterprises

Gross farm income for all animal enterprises was over \$1.63 billion for 2019, down 10.1% from \$1.82 billion in 2018. Value added was nearly \$1.03 billion for 2019, down from \$1.15 billion in 2018. Total value of all animal enterprises in the Louisiana economy was \$2.67 billion, down 10.3% from \$2.97 billion in 2018.

Beef Cattle

As with the trend seen across the U.S., the Louisiana beef cattle industry has seen marginal increases in beef cow numbers over the last few years. Total beef cow inventory numbers increased again in 2019, totaling an estimated 589,845 head, up from 576,525 in 2018. Much of the increase seen in cattle numbers in the state over the last several years has likely been driven by several factors. First, ample rainfall over the last several years has allowed for more forage production and has allowed producers to expand operations. Second, record level cattle prices in the mid-2010s helped to grow additional cattle numbers. Also, with commodity prices for many of the row-crop commodities being depressed, cattle production continues to be an attractive alternative for some producers despite lower prices from those mid-2010s levels. Finally, as the increased interest in locally grown foods has swept the country, there seems to be an increased interest in agricultural production and, particularly, beef cattle production by individuals not traditionally tied to agriculture.

The 2019 production year was generally viewed as favorable by the cattle industry. Ample rainfall throughout much of the year helped pastures and forage availability for most operations. In addition, low feed grain prices and other low input prices helped to maintain profitability despite marginally lower cattle prices. The outlook for the cattle market and prices was generally favorable to start 2019 as supplies were projected to be more manageable and demand was expected to continue to be strong. However, a fire at a large processing plant later in the year caused significant shocks to the market as beef movement through marketing channels was affected. This caused a ripple effect throughout the cattle market and put significant downward pressure on prices. So, despite the optimism to start 2019, market shocks and higher than expected beef production for the year helped to lower prices for most classes of beef cattle. While ample rainfall helped pasture conditions, excessive rainfall in the spring and early summer likely delayed hay production for many producers, impacting both overall production and quality.

The Louisiana cattle industry remains primarily a cow-calf industry, with the majority of the cattle marketed in the year being calves weighing less than 700 pounds. Of the total estimated 573,029 head of beef cattle marketed in 2019, nearly 72% were steer and heifer calves weighing less than 700 pounds. The gross farm value of 213,849 steer calves sold in 2019 was \$132.2 million, a decrease of roughly \$25.7 million from the \$157.8 million reported in 2018. The gross farm value of 197,467 heifers sold in 2019 was \$103.6 million, a decrease of roughly \$23.5 million from the \$127.1 million reported in 2018.

In 2019, 54,543 yearling cattle (600-800 pounds each) sold for \$40.1 million, a decrease of roughly 9,754 head and \$14.0 million from 2018 levels. The number of cow-calf pairs sold in 2019 was reported at 46,733, up roughly 587 pairs from 2018. The slight increase in the number of cow-calf pairs sold helped to offset slightly lower prices in 2019, leaving the gross farm value essentially unchanged at \$42.4 million from 2018. Finally, gross farm value income for cull cows was lower in 2019 due to lower prices, while the value for cull bulls was higher based predominately on a higher marketing. Gross farm value for cull cows was reported at \$18.4 million, while gross farm income for cull bulls was \$7.8 million.

When added across all classes of beef cattle, the total gross farm value generated by the beef cattle industry in 2019 was estimated at \$344.5 million, down roughly \$69.2 million from 2018. The market disruptions experienced in 2019 put considerable downward pressure on prices. Lower prices, along with slightly lower cattle marketing, helped drop total gross farm value significantly from the previous year. When value-added activities of \$43.1 million are added to gross farm income, the total economic impact of the beef industry in Louisiana during 2019 was estimated at \$387.5 million.

Animal Enterprises

Dairy

Milk production was reported by nine parishes in 2019. Three parishes in the southeastern part of the state and one parish in the northwestern part accounted for over 90% of the herds and cows and milk produced. The number of dairy farms declined from 92 in 2018 to 81 in 2019. The number of milking cows decreased from 10,296 head in 2018 to 9,357 head in 2019. Total milk production decreased from 151.4 million pounds in 2018 to 141.6 million pounds in 2019. Despite a nearly 10-million-pound reduction in milk production in 2019, an over 7% increase in milk prices helped to maintain the on-farm value of milk from the previous year at roughly \$26.1 million.

The value of cull cows, bred heifers, mature cows, breeding-age bulls and calves was about \$3.9 million. The total value of milk and animal sales to Louisiana dairy producers was \$30.1 million. Value-added activities contributed over \$48.4 million more. The total economic contribution from dairying in Louisiana, including milk sales, animal sales and additional processing was \$78.5 million, an increase of about \$1.8 million compared to the previous year.

Another component to the state's dairy industry has been the production of goat's milk. While small compared to the dairy cattle industry, dairy goat production has continued to be a viable industry in the state. In 2019, dairy goats were raised by 47 producers. A total of 512 does were reported to have been milked during 2019, producing slightly under 600,000 pounds of goat milk. The gross farm income of the dairy goat industry was estimated at \$0.32 million in 2019, up marginally from the \$0.31 million generated in 2018.

When combined, milk production from cattle, milk production from goats and the sale of dairy cattle animals generated a gross farm value of \$30.4 million in 2019, up slightly from the \$29.7 million generated in 2018. Value-added activities associated with the dairy industry contributed another \$48.9 million in economic activity to the state in 2019. Total economic activity (gross farm value plus value-added activity) of the Louisiana dairy (dairy cattle and goats) industry was estimated at \$79.3 million in 2019, up from \$77.5 million in 2018.

Horses

The horse industry continues to be a significant component of the agricultural economy in Louisiana. The horse industry has traditionally been able to be categorized into three sectors: racing, show or competition, and recreational. In terms of number of horse owners, the breakdown of the industry in 2019 into these three sectors was 9% racing, 13% show or competition, and 78% recreational. While the racing sector was the smallest sector in terms of number of horse owners, it presented the largest share of gross farm value generated by the horse industry. In 2019, the breakdown of the horse industry by percentage of total gross farm value generated by each sector was 52% racing, 27% show or competition, and 21% recreational.

The state's racehorse industry in 2019 involved 1,584 breeders who owned 8,397 mares that produced 6,777 foals that sold for \$40.7 million. Breeders also owned 1,017 stallions that were bred to 8,743 mares, generating income from stud fees of \$21.8 million. The total gross farm value generated from racehorse production was \$62.5 million. An additional 2,092 racehorse owners had 11,395 racehorses in training or on the track in Louisiana, with a gross farm value of \$113.9 million. The gross farm value of the entire race sector (owners' and breeders' activities) of the horse industry in 2019 was \$176.5 million, not including receipts or fees from racing events or gaming.

The show and competition horse industry (horse shows, barrel racing, cutting, roping, team penning and others) includes 1,284 breeders who own 4,605 mares that produced 3,499 foals that sold for \$14 million during 2019. These breeders owned 557 stallions that bred with 2,862 mares, generating \$4.3 million in income from stud fees. The total income generated from show and competition horse production was \$18.3 million. Another 4,274 owners competed on their 14,500 horses, which had a gross farm value of \$72.5 million. The total gross farm value of the show and competition sector of the horse industry was \$90.8 million in 2019.

A large portion of the horse industry, both in terms of owners and horses, is recreational. Horses have been used for comfort, exercise and enjoyment for quite some time. Approximately 8,868 recreational horse owners in Louisiana bred 21,287 mares and sold 16,703 foals during 2019 for \$18.4 million. These horse enthusiasts owned 2,241 stallions that were bred to 5,601 mares, generating income from stud fees of \$2.8 million. The total income from production in the

Animal Enterprises

recreational horse industry was \$21.2 million during 2019. Another 21,985 recreational horse owners have 46,754 horses valued at \$51.4 million, making the total economic contribution of the recreational horse industry \$72.6 million in 2019.

There was a total of 137,732 horses in Louisiana owned by 39,749 people, with a gross farm value of \$339.9 million in 2019. Value-added activities contributed an additional \$37.5 million in 2019, so combining farm-gate value and the value-added activities, the total value of horse sector was \$377.4 million in 2019.

In addition to the estimates of gross farm value and value-added activities, there are other potential impacts of the horse industry to the state's economy. First, the average horse owner has been reported to spend about \$4,000 to \$6,000 annually on items such as feed, tack, equipment, veterinary supplies and medicines. Second, the four racetracks in the state employ a large number of people and have been reported to generate expenditures of over \$1 billion annually. Finally, the show and competition industry conducts numerous events and activities each year and is estimated to generate \$200 million annually in expenditures. The American Horse Council suggests that the total economic impact of horse production and related activities like horse racing and competitions is in excess of \$2 billion annually for the state of Louisiana.

Poultry

Broilers and Eggs

Poultry production continues to be the largest animal agricultural industry in Louisiana and is second only to forestry in total economic value for all agricultural commodities. In 2019, 608 Louisiana growers (small producers and commercial operations) produced 947.3 million pounds of broiler meat with a gross farm value of \$843.1 million. Commercial broilers are produced in 11 parishes: Bienville, Claiborne, Jackson, Lincoln, Natchitoches, Ouachita, Sabine, Union, Vernon, Webster and Winn.

While broiler production is far and away the largest component of the poultry industry in the state, there are several other components that positively contribute to the state's economy. A total of 151 breeder flock producers in 2019 produced 17.3 million dozen hatching eggs with a gross farm value of \$46.3 million. A total of 99 pullet producers produced over 1.2 million pullets with a gross farm value of \$18.5 million. Finally, a total of 635 egg producers (small producers and commercial operations) had a total table egg production value of over 20.2 million dozen eggs valued at \$11.3 million.

When all the facets of the poultry industry are combined, the total gross farm value was estimated at \$919.8 million in 2019, down nearly \$117 million from 2018. The decrease in 2019 was a function of both reductions in production and marketing as well as lower prices. Broiler production was down about 10 million pounds from the previous year and marketing of edible eggs and hatching eggs were also down significantly. In addition, prices for broilers and edible eggs were down sharply in 2019. Value-added activities associated with poultry production added an additional \$896.8 million in economic activity in the state, bringing the total economic impact of the poultry industry to \$1.82 billion in 2019.

Quail

Quail production in the state generally consists of smaller operations reaching niche markets. In 2019, a total of 15,195 quail were estimated to be produced and sold by 14 producers, resulting in a gross farm value of \$44,066. Value-added activities associated with quail production provided an additional \$4,847, bringing the total economic contribution of the quail industry to \$48,913 in 2019.

Rabbits

The production of rabbits for meat and exhibition involved 444 Louisiana producers during 2019. The rabbit fryer industry produced approximately 31,627 pounds of meat in 2019. Louisiana rabbit producers generated \$118,507 in gross farm income. With value added of \$12,443, the total value of rabbit production in Louisiana during 2019 was \$130,950, up nearly \$8,700 from the previous year.

Animal Enterprises

Sheep and Goats

Sheep and lambs and wool were produced by 271 producers in 35 Louisiana parishes during 2019, compared to 263 in 2018. The total number of lambs that were marketed (slaughter, feeder and club show lambs) was estimated to be 3,880 in 2019 with a gross farm value of \$730,522. With a gross farm value of \$51,626, the 381 head of stocker sheep sold in 2019 represented a slight increase in value from the previous year. The number of cull sheep sold in 2019 was 671, up from 637 in 2018. Cull sheep sold for \$75,347 in 2019. Wool production from 2,321 sheep produced 13,812 pounds of wool, which was down from 2,415 sheep and over 14,500 pounds of wool in 2018. The total gross farm value of the sheep industry was estimated at \$865,091, down from \$962,613 in 2018.

The Louisiana goat industry during 2019 consisted of an estimated 903 producers in 58 parishes, up from 834 producers in 2018. Total inventory of breeding-aged does was estimated at 10,786 does in 2019, down marginally from 2018. Goat producers marketed a total of 5,884 slaughter goats valued at \$881,776 in 2019. Stocker goats sold in 2019 numbered 3,177 with a value of \$409,897. There were 1,368 cull goats marketed in 2019 at a value of \$155,542. Goats sold as club or show goats numbered 1,230 head, valued at \$430,500. Gross farm value of goats sold in Louisiana during 2019 was \$1.88 million, down slightly from the \$1.95 million estimate in 2018.

Swine

The Louisiana swine industry is primarily composed of relatively small producers. In 2018, 277 producers were estimated to have a total inventory of 1,970 sows with an average sow inventory per producer of just more than seven sows. Other than servicing a local or niche market, most of the swine production in the state is targeted to the show club pig market. In 2018, 2,220 show pigs were estimated to be sold with a gross farm value of \$770,000, representing roughly 47% of the total gross farm value generated by the swine industry. Sales of feeder pigs, slaughter hogs and culls represent the remaining 53% of the total gross farm value generated by the industry. In 2019, 4,775 feeder pigs were sold for an estimated value of \$289,136. Sales of 3,068 slaughter hogs generated a gross farm value of \$454,119, while the sale of 726 cull animals (sows and boars) generated a gross farm value of \$139,711.

When added together, the gross farm value of all classes of swine is estimated at \$1.65 million for 2019, up from the \$1.27 million in 2018. Value-added activities associated with the swine industry are estimated at \$206,621, bringing the total economic impact of the industry to the state economy to \$1.86 million, up from \$1.43 million during the previous year.

Exotic Animals

While still a relatively small component of the total agricultural industry, exotic animal enterprises did see marginal increases in 2019. The number of producers statewide was estimated at 56 in 2019, up from 47 in the previous year. In addition, the total number of animals marketed increased from 690 in 2018 to 886 in 2019. Total gross farm value was estimated at \$222,175 in 2019, up from \$138,500 in 2018. Total value of production for exotic animals, including value-added activities, is estimated at \$245,503 for 2019.

Fisheries and Wildlife Enterprises

Total farm value of all fisheries and wildlife enterprises during 2019 was \$852.8 million, down less than 1% from the \$859.5 million in 2018. Value added in 2019 was \$568.7 million, up marginally from \$567.9 million the previous year. Total value of all fisheries and wildlife enterprises to the Louisiana economy for 2019 was \$1.42 billion, down marginally from the \$1.43 billion in 2018.

Aquaculture

Louisiana has long been recognized for supporting one of the most diverse aquaculture industries in the United States. Species and products such as crawfish, catfish, alligators, oysters, tilapia, baitfish, soft-shelled crawfish and crabs, ornamental fish, baby turtles, a variety of freshwater game fish and other minor species all have been commercialized successfully. Louisiana's producers continue to be among the leaders in the nation in crawfish, oyster, pet turtle and alligator sales.

Farm-raised crawfish continued to be the state's most valuable aquaculture sector in 2019, representing roughly 54% of the total gross farm value generated across all commercial aquaculture enterprises. Growth in demand, both within the state and regionally, has created increasing incentive for expansion of acreage and production over the last several years. Crawfish production has increasingly been incorporated in other farming operations in recent years as producers look to offset struggling rice markets. Estimates from the field in 2019 indicated farm-raised crawfish production occupied 247,753 acres, up 4.4% from the previous year. While acres were up, periods of unfavorable weather conditions helped to push total production down from 151.8 million pounds in 2018 to 140.6 million pounds in 2019. With the lower production levels, gross farm value fell in 2019 to \$201 million from \$209.5 million in the previous year. The reduction in total gross farm value was limited by prices in 2019 that were estimated to be roughly \$0.05 per pound higher than in 2018.

A total of 434,763 farmed alligators were harvested in 2019. Farm-raised alligators were once again the second-largest segment of Louisiana's aquaculture industry, with an estimated gross farm value of \$86.1 million. This was down sharply from the previous year's estimate of \$102.4 million primarily due to lower prices. Prices in 2019 were estimated to be roughly 10% lower than the previous year as continued supply and demand imbalances in domestic and world markets continues to pressure prices. Production volume for farm-raised alligators, at 1.87 million feet, down nearly 7% from the previous year.

Oyster production typically represents the third largest segment of Louisiana's aquaculture industry. The oyster production information reported in this summary represents a one-year lag. Information on Louisiana oyster harvests and sales is compiled by the Louisiana Department of Wildlife and Fisheries and provided to the National Marine Fisheries Service, but the final compilation of the data is not available until the middle of the following year. Oyster sales in 2018 reached 1.72 million sacks from a total of 895 producers, valued at \$77.5 million. Production was down in 2018 by over 16% from the previous year, but gross farm value was only down by 8% as prices continued to improve with lower overall supplies and still strong demand.

While the remaining segments of the aquaculture industry continue to provide positive economic impacts to the state, they are significantly smaller than crawfish, alligator and oyster production. Pet turtle hatchling production declined again in 2019, with estimated sales of 1.2 million animals and a gross farm value of \$1.3 million, decreases of roughly 29% for both production and value from the previous year. Many licensed turtle operations continue to be inactive. Fish bait production continues to evolve to meet the demands of recreational fishers, with most production held in recirculating or flow-through systems prior to sale. In 2019, the estimated gross farm value of the fish bait industry was \$1.7 million, up marginally from the prior year. The catfish and minnow industries experienced moderate decreases in both production and gross farm value. In 2019, the gross farm value of Louisiana's catfish industry was \$460,080, while that of the minnow industry was \$51,450. These industries are not expected to grow significantly in the coming years because they have been forced to compete with more consolidated and concentrated competitors in other states.

Other aquaculture species include products such as game fish fingerlings, tilapia, ornamental fish, soft-shell crabs and crawfish, and other minor species. Each has a very limited number of producers. Private ponds are found

Fisheries and Wildlife Enterprises

throughout Louisiana, with an estimated 127,200 ponds totaling 42,400 acres. Although these private ponds are not included in the 2019 state total, they do have positive economic impacts.

Examining the economic impact across all commercial enterprises indicates that the total gross farm value of Louisiana aquaculture in 2019 was \$369.5 million, down 8% from the previous year. Value-added activities associated with aquaculture products added an additional \$249.4 million to the state's economy, bringing the total impact of Louisiana's commercial aquaculture to \$618.8 million in 2019.

Fisheries

The harvest of freshwater and marine finfish and shellfish in Louisiana continues to contribute significantly to the state's economy. Fishery landings are recorded by two government agencies. The Louisiana Department of Wildlife and Fisheries receives monthly reports from the initial buyers (processors, dealers, etc.) who are required to record every transaction via trip tickets. Species, weights and dockside sales values of the landings are reported for all commercially harvested species. The National Marine Fisheries Service also is responsible for estimating fisheries landings, using both regional National Marine Fisheries Service data collectors and Louisiana Department of Wildlife and Fisheries reports. The information reported here is from those two cooperating sources. All this data is provisional and subject to change.

The freshwater and marine fisheries data presented in the report this year (2019) reflect the calendar year 2018. The one-year lag is necessary to ensure data accuracy. Real-time reports on fisheries landings are not available until four months after the fact, and final data often run six to seven months behind. Estimating landings for the second half of the year based on landing reports from the first half is inaccurate. This method of reporting fisheries landings data has been in place since the 2004 Louisiana Summary. Data prior to that volume may not be directly comparable to the data reported since 2004 because of using the different estimation methods. To compare state-level landings for years prior to 2004 on a calendar-year basis, please consult the U.S. National Oceanic and Atmospheric Administration National Marine Fisheries Service website.

One final caveat is that parish totals for fisheries landings will not equal the state total because of legal confidentiality requirements. When there are fewer than three sources in a parish that report landings of a fisheries commodity, the number of landings cannot be publicly released by the Louisiana Department of Wildlife and Fisheries without breaking confidentiality requirements. There may also be parishes reported in this volume for which no landings or values were provided by either of those agencies but for which there was catch. Furthermore, fisheries landings are reported for the parish in which the fish are offloaded, not the parish in which the boat and its crew may be domiciled or the parish where the catches actually were made. However, producer estimates are based on commercial licenses, which are based on the fishermen's domicile.

Freshwater Fisheries

The freshwater finfish are primarily bowfin, catfish, buffalo, shad, gar and carp and are less valuable on a per-pound basis than marine finfish. Total freshwater finfish value remained mostly unchanged in 2018 as an estimated 2,016 commercial fishermen caught 12.8 million pounds valued at \$5.6 million. While total catch was up slightly from the 12.1 million pounds caught in 2017, the average price fell from \$0.48 per pound in 2017 to \$0.44 per pound in 2018. With the lower prices, total value was down less than \$200,000 from the 2017 value of \$5.8 million.

Catfish are the mainstay of the more valuable freshwater species. The commercially caught catfish are not the same as farm-raised catfish described in the aquaculture section of this summary. Sales of catfish caught commercially in Louisiana waters were \$3.2 million for 4.7 million pounds.

Most wild crawfish are caught in the Atchafalaya Basin, where water levels fluctuate as inflows are controlled by the U.S. Army Corp of Engineers at one-third of the combined flows of the Mississippi and Red rivers. Although wild crawfish compete in the marketplace with farm-raised crawfish, some consumers prefer the wild product because of its frequently larger size. The volume of the wild crawfish harvest is almost completely constrained by the timing and duration of the annual winter spring floodwater event in the Atchafalaya Basin. Landings in 2018 were estimated at 11.7 million pounds and valued at nearly \$13.1 million. Landings were up over 36% from the previous year. And while landings were significantly higher, total value was up only roughly 8% from the previous year. Much larger supplies in 2018 helped to pressure prices, resulting in an average price of \$1.12 per pound versus the average price of \$1.48 per pound in the previous year where supplies were more limited.

Fisheries and Wildlife Enterprises

Overall, landings from the freshwater fisheries sector in 2018 had a gross value of \$18.7 million, up from \$17.9 million during the previous year.

Marine Fisheries

The last few years have seen a lot of flux within marine fisheries with the 2010 Deepwater Horizon oil spill leading to record low catches due to closures and perception for most fisheries. However, marine fisheries grounds were almost all reopened in 2011, and all marine fisheries saw an increase in landings in 2011 and 2012 compared to 2010. The final closed areas of Louisiana opened in 2015. Marine finfish landings for food are varied and complex, with about 60 different species being landed for a total of 10.4 million pounds in 2018, excluding menhaden. This was roughly a 3% decline from 2017, when 10.6 million pounds of marine finfish were landed in Louisiana. Excluding menhaden, the five most-valued species landed in 2018, by decreasing value, were red snapper, black drum, yellowfin tuna, king mackerel and striped mullet. Total saltwater finfish landings, excluding menhaden, were valued at \$17.4 million, a 3.4% decrease from \$18.0 million in 2017.

Landings of menhaden or pogey, a low value but high-volume nonfood finfish species, were 885 million pounds in 2018, a 19.4% increase from the 716 million pounds in 2017. The catch was valued at \$90.7 million in 2018, a 40.7% increase from the \$64.4 million in 2017. After declining in 2017, menhaden prices increased in 2018, going from about 8.5 cents per pound in the previous year to 10.5 cents per pound. Menhaden oil and meal are sold on the world market for industrial purposes, animal feeds and omega-3 dietary supplements, among other uses, and the prices received for menhaden products is a function of the world supply of oils and meals, particularly those produced by the fisheries for the anchoveta of the Pacific Coast of South America.

Oyster production was higher in 2017 after several poor harvest years. Production in 2018 was not able to continue that trend of higher production as total harvest dipped to 11.1 million pounds (1.7 million 50-pound sacks) in 2018, down from the 13.3 million pounds in 2017. With the lower harvest levels, total value fell to \$77.5 million in 2018 from the previous year's value of \$84.3 million. With the lower production and still steady demand, prices in 2018 increased to \$6.98 per pound (\$45.18 per 50-pound sack) from the \$6.33 per pound experienced in 2017.

Blue crabs constitute nearly all of the Louisiana crab harvest, with stone crab claws making up less than 0.01%. Louisiana hard crab landings normally range from 40 to 50 million pounds. However, stock assessments show stocks fell below acceptable levels in 2012 and 2014 and were overfished in 2013 and 2015. Blue crab landings were up by 10% in 2017 and followed that up with another 2.4% increase in 2018. In 2018, a total of 2,536 license holders harvested 45.1 million pounds with a gross value of \$63.6 million. Despite a relatively small increase in production, total gross value was up over 18% from the previous year as prices in 2018 were estimated at an average of \$1.41 per pound, up from \$1.23 per pound in the previous year. While 2018 landings remained in the 40-to-50-million-pound range, they were still lower than when fishers harvested 51 million pounds in 2009.

Peeler or buster crabs are blue crabs that are close to molting their shells. These crabs are sold to soft-shell crab facilities to produce soft-shell crab. In 2016, the soft-shell industry continued to see declines from 145,090 pounds of peeler crabs and 10,865 pounds of soft-shell crab in 2016 to 24,119 pounds of peeler crabs and 10,171 pounds of soft-shell crab in 2017. In 2009, production of soft-shell crabs (35,484 pounds) and peeler crabs for the shedding business (171,656 pounds) had increased from the lowest ever recorded in 2008 due to many shore-side shedding facilities being damaged or destroyed by the 2005 and 2008 storms. Hurricane Isaac in the fall of 2012 may have affected shedding facilities, too. Overall, the soft-shell crab industry has been in steady decline for at least two decades.

Louisiana shrimp landings in 2018 consisted of six species: white shrimp, brown shrimp, sea bobs, pink shrimp, roughneck shrimp and other (either royal reds or rock). White shrimp historically have provided 50%-60% of the harvest by weight and around 70% by value. This continued to be the case in 2018 as white shrimp contributed about 55% of total weight and just less than 70% of total value. In 2018, brown shrimp landings made up about 44% of total weight and nearly 30% of total value. Total shrimp landings in 2018 were 97.2 million pounds, up 3% from 2017 when 94.3 million pounds were harvested. By comparison, 74.2 million pounds of shrimp were harvested in 2010 when most of the fishing grounds were closed at least at some point in the year because of the spill, and 114 million pounds were harvested in 2009. Shrimp landed in Louisiana had a gross value of \$120.6 million in 2018, down 10% from 2017. After being around \$1.42 per pound for the previous two years, shrimp prices in 2018 fell to around \$1.24 per pound. This is back to the level experienced in 2015 and is at a significant discount from 2013 and 2014, when prices were in the \$1.80 to \$2 per pound

Fisheries and Wildlife Enterprises

range when diseases issues in Asia and South America reduced the amount of imported farmed shrimp coming into the country.

In 2018, marine fisheries landings in Louisiana were valued at \$292.3 million, up from \$270.7 million in 2017.

Fur

As reported by the Louisiana Department of Wildlife and Fisheries, the total value of the 2018-2019 furbearer harvest was estimated at \$48,075, down slightly from \$50,394 reported during the previous year. This value represents total pelts across all species shipped out of state by fur dealers and individuals but does not include income associated with meat production from harvested furbearers.

The total number of trapping licenses sold increased slightly this year from 2,374 licenses reported in 2017-2018 to 2,572 reported in 2018-2019. However, the total number of pelts harvested in 2018-2019 was slightly lower at 5,395 pelts compared to 5,542 pelts harvested in 2017-2018. The average price paid for a single pelt taken during the 2018-2019 trapping season was \$8.91, down slightly from \$9.09 the previous year but \$1.80 per pelt higher than the 10-year average. The 10-year average price per pelt ranged across species ranged from \$0.70 for opossum to \$36.25 for bobcat.

Nutria harvested during the 2018-2019 season were 223,155, which is up substantially from last year's total of 170,471 but still well below the average annual harvest. During the 2018-2019 season, it was decided to increase the bounty paid for nutria from \$5 to \$6. This increase will go into effect during the 2019-2020 season and is expected to increase the harvest. The average price paid for nutria pelts was \$2, up from about \$1.77 in the previous year. When the additional \$5 per nutria paid under the Coastwide Nutria Control Program (CNCP) is considered, the total value of the nutria harvested is estimated at \$1.1 million, up from \$852,355 in the previous year.

Hunting Lease Enterprises

The value of recreational hunting in Louisiana is estimated by the income derived from hunting lease enterprises. The number of producers who leased land in the state during the 2018-2019 hunting season was estimated at 5,938, up slightly from 5,905 reported during the 2017-2018 hunting season. This figure consists of 4,403 individuals who leased their land for upland game hunting (primarily white-tailed deer and wild turkey) and 1,535 individuals who leased their land for waterfowl hunting.

In 2018-2019, approximately 6.25 million acres were leased for upland game hunting, and approximately 1.82 acres were leased for waterfowl hunting. Both estimates are mostly unchanged from the previous year, when approximately 6.16 million acres were leased for upland game hunting and approximately 1.84 million acres were leased for waterfowl hunting. In 2018-2019, the estimated value for upland game hunting leases was \$109.5 million and \$51.8 million for waterfowl. The value for upland game hunting was up nearly \$2 million from the previous year, while the value for waterfowl hunting was down around \$500,000. The estimated price per acre of leased land for hunting purposes remained unchanged in 2018-2019 at \$17.50 per acre for upland game and \$28.40 per acre for waterfowl.

Honey

The production of honey in 2019 was 3.3 million pounds. This production was over 18% higher than the previous year's value of 2.7 million pounds. Better weather and production conditions along with continued expansion in the number of producers and hives were likely the primary reasons for the large increase. The wholesale price of honey in 2019 was estimated at \$1.78 per pound, up marginally from \$1.75 in 2018. In addition to the value of the honey, other value can be generated by beekeepers in the sale of queens and bees. While not included in the Ag Summary calculations, the current prices of queens are estimated at \$35 per queen, while the price of a five-framed nuc (a small honeybee colony) ranges from \$150 to \$160. The number of hives estimated in 2019 was 42,626, up from 35,841 estimated in 2018. The number of beekeepers commercially selling honey was estimated at 1,068, also up from the 986 estimated in 2018. Interest in beekeeping continues to grow as people continue to seek to become hobby beekeepers. In addition, the purported anti-allergenic properties of local honey is one of the reasons that demand for local honey continues to be strong.

Fisheries and Wildlife Enterprises

Gross farm value for honey production in 2019 was estimated at \$5.9 million, up from 4.87 million in 2018. When value-added activities are added, the total economic impact of honey enterprises was estimated at \$7.3 million. As mentioned previously, other values of beekeeping include pollination services, the sale of fertilized queen bees, package bees, and hive nuclei (commonly called hive nucs), and the sale of wax, propolis, pollen and other hive products.

Plant Enterprises

The gross farm value of all plant enterprises was more than \$3.44 billion in 2019, a decrease of 6.4% from \$3.68 billion in 2018. Value added was \$3.63 billion for all plant commodities during 2019, up from \$3.59 billion in 2018. Total value of all plant or crop enterprises to the Louisiana economy was \$7.07 billion in 2019, down 2.75% from \$7.27 billion in 2018.

Cotton

In 2019, 270,660 acres of cotton were harvested in the state of Louisiana, which compares to 190,567 in 2018 and 212,404 acres in 2017. Fifty-seven percent of the acres in 2019 were irrigated. Yields across irrigated and dryland acres averaged 1,080 pounds of lint per acre, which compares to 1,105 and 926 pounds of lint per acre in 2018 and 2017, respectively.

Gross farm value of cotton lint sales was \$195.8 million in 2019, with \$118.2 million from lint harvested on irrigated land and \$77.6 million from sales of lint harvested from nonirrigated land. Sales of cotton seed contributed an additional \$51.4 million. Gross farm value of all cotton sales was \$247.2 million, with value added contributing \$61.8 million, so that total value of cotton production in 2019 was \$309.0 million.

Feed Grains

In 2018, there were 551,164 acres of feed grains harvested in the state, up over 100,000 acres from the 441,051 acres harvested in 2017. All the increase in feed grain acres was attributable to corn as harvested acres of corn went from 431,315 acres in 2018 to 544,802 acres in 2019. Grain sorghum acres were down over 2,000 acres in 2019 from the previous year, while oat acres were down more than 700 acres. Lower commodity prices for competing crops were likely a large reason for the significant increase in corn acres. Grain sorghum acres continued to move lower as weak export demand continued to keep basis levels and cash prices low for this commodity.

With higher acreage and steady yields, overall gross farm value for feed grains experienced an increase in 2019. The gross farm value for all feed grains was estimated at \$388.2 million in 2019, up 28.5% from the previous year. Value added for feed grains was estimated to be \$67.9 million in 2019, so the total value, including both gross farm value and value added of feed grain production in Louisiana for the year was \$456.1 million, up from \$354.8 million in 2018.

Corn

There were 544,802 acres of corn harvested in 2019, which compares to 431,316 in 2018 and 484,221 in 2017. Corn yields in 2019 averaged 179.1 bushels per acre, which is slightly below the 2017 crop, which averaged 182.8 bushels per acre. Approximately 72% of the corn acres were produced on irrigated land in 2019. For the past five years, corn yields in Louisiana have averaged 176.8 bushels per acre.

Gross farm value of corn production in 2019 was \$386.2 million, up significantly from the 2018 value of \$298.8 million. Sharply larger acreage and moderately higher prices helped to more than offset a slight reduction in per acre yields to create the larger gross farm value.

Grain Sorghum

In 2019, 6,054 acres of grain sorghum were harvested throughout the state. This compares to 8,656 acres harvested in 2018 and 12,565 acres harvested in 2017. This is the eighth year in a row that grain sorghum acres have declined in Louisiana. Grain sorghum yields in 2018 averaged 83.2 bushels per acre, which is well below the 2018 crop, which averaged 92.3 bushels per acre, and the 2017 crop, which averaged 88.9 bushels.

Gross farm value of sorghum production was \$1.8 million, down substantially from \$2.9 million in 2018 due to lower acreage and lower total production.

Plant Enterprises

Oats

In 2019, three producers harvested 307 acres of oats in the state. This was down substantially from the 1,078 acres harvested and the seven producers in 2018. The average oat yield in 2019 was 66.2 bushels per acre, compared to 61.3 bushels reported in 2018. Gross farm value of oat production was \$59,160 in 2019, compared to \$185,642 in the previous year.

Forestry

The projected Louisiana gross farm value of harvested forest products increased by 6.06% during the 2019 calendar year, ending the year at \$921 million dollars in mill-delivered revenue. In terms of grade stumpage products, the story was rather mixed, with both pine and hardwood sawtimber showing large swings. The pine sawtimber harvest increased by 13% from the prior year and posted a total statewide harvest of approximately 971.9 million board feet during 2019. However, the hardwood sawtimber harvest decreased during 2019, a 17% decrease to 82.9 million board feet. Pine chip-n-saw also saw significant decreases in 2019 with a total harvest of 855,337 cords, a decrease of 11% from 2018 levels.

The total pulpwood harvest was 5.68 million cords, up less than 1% from the previous year. Pine pulpwood harvest increased by 5%, from 4.85 million cords during 2018 to 5.14 million cords in 2019. As with sawtimber, hardwood pulpwood harvest experienced a large decrease in 2019, with total harvests totaling 542,231 cords compared to 779,334 cords in 2018, a more than 30% decrease.

Stumpage prices paid for pine sawtimber during 2019 averaged \$194.98 per thousand board feet, up slightly from the prior year and bringing the two-year trend of lower prices. This average represents approximately a 1.02% increase from the previous year (\$193 per thousand board feet). Prices paid for mixed hardwood sawtimber during 2019 averaged \$313.55 per thousand, which is a 7.47% increase from the previous year (\$291.75 per thousand). Pine chip-n-saw averaged \$50.74 per thousand in 2019, which was up \$2.01 from the previous year. Pulpwood stumpage prices averaged \$23.56 per cord per for pine, down 3.86% from the previous year, while hardwood pulpwood averaged \$35.15 per cord, up 20.81% from the previous year's average.

Delivered prices were up in 2019 for all three sawtimber class products over the period reported (pine sawtimber up 3.563%, mixed hardwood up 10.5% and chip-n-saw up 3.5%). In terms of pulpwood products, hardwood pulpwood was up approximately 8.2%, while pine pulpwood was up marginally at 2.8%.

As a caution, individual landowners should not look at Timber Mart South Prices as an indication of what they will get for timber sold on their land, but rather as a gauge to judge price trends and directions. Timber owners should contact a consulting forester who can help them best gauge the market for their timber as the prices received for individual tracts varies considerably depending on local market conditions and specifics of their individual property.

During the year, Louisiana's private forest landowners received an estimated \$399.6 million from the sale of forest timber (stumpage), up 3.9% from the \$384.6 million in the previous year. Timber harvesting contractors and their employees earned approximately \$521.5 million from harvesting the trees and moving wood to mills during 2019, an increase of 7.78% from \$483.8 million in 2018.

Fruit Crops

Louisiana's commercial fruit production is diverse, ranging from low-growing berries to tree fruits. Producers grow both temperate and semitropical crops, thanks to our climate. Many commercial orchards operate on a U-pick basis. Some operations sell both trees and harvested fruit, and others directly market their crops through farmers markets, grocery stores and community supported agriculture (CSA) farms. Many growers plant a variety of fruit trees and shrubs to ensure multiple harvest times throughout the year and continued cash flow. In 2019, commercial fruit crops were harvested on roughly 2,373 acres. Gross farm value for commercial fruit production was \$28.9 million in 2019, down from \$32.7 million in 2018.

Plant Enterprises

In 2019, Citrus was again the No. 1 fruit crop in terms of acreage, with 635 acres in production. Blueberries, mayhaws, peaches, muscadines and strawberries continued to be important fruit crops with all having more than 200 acres in commercial production, ranging from 212 acres to as high as 479 acres. Smaller crops, such as blackberries, figs and pears, continue to be produced in different areas of the state with acreage ranging from as low as 32 acres statewide to just over 100 acres. In terms of gross farm value, strawberries led the way among fruit crops with an estimated value of \$8.4 million. Citrus, given its larger number of acres, was the second largest fruit crop with a farm gate value estimated at \$7.8 million. Other fruit crops that generated farm gate values above the \$1 million level were blueberries, blackberries, mayhaws and muscadines. The remaining fruit crops had gross farm values ranging from a low of around \$60,000 to a high of around \$800,000. Just as a note, these acres and values reflect commercial production. Louisiana backyard gardeners also grow many fruit crops. The top three backyard fruit crops are citrus, figs and blueberries.

A variety of impediments has contributed to a decline in fruit production. In no particular order, Louisiana fruit producers face huge disease and insect pressure, especially in the citrus and peach industry. Citrus canker, citrus greening and Armillaria root rot in peaches have devastated these industries. Many growers are beginning to consider retirement and family members are often not willing to take over the day-to-day farm operations. Some growers have even stated that their land is more valuable as residential and commercial property rather than remaining in agriculture production. Louisiana producers face competition from neighboring states and overseas fruit production, especially with consumers demanding year-round availability of fruit crops. While this group of farmers faces many challenges, they are always striving to produce high quality fruit that tastes great, is produced with best management practices and is served fresh to Louisiana residents.

Blackberries

Total acres harvested in 2019 was down roughly 5% from the previous year to just over 101 acres. Yields were also slightly lower in 2019 with average production per acre estimated at 4,770.3 pints per acre as compared to 4,857.9 pints per acre in 2018. With lower acreage and average yields, total production in 2019 fell by roughly 7.6% from the previous year. Lower production and slightly lower prices in 2019 led to a 13.4% reduction in total gross farm value. Gross farm value was estimated at \$2.1 million versus \$2.4 million in 2018.

Blueberries

Gross farm value of blueberries decreased by 11.5% in 2019, going from \$7.4 million in 2018 to \$6.5 million in 2019. Lower acreage and slightly lower prices were the primary reason for the reduction in total value. Harvested acres fell by just over 5%, going from 406 acres in 2018 to 376 acres in 2019. Prices fell from \$4.61 per pound in 2018 to \$4.30 per pound in 2019. Average production per acre, however, did show a moderate increase in 2019 with an average yield of 4,045.5 pounds per acre versus 3,952.8 pounds per acre in the previous year.

Citrus

The Louisiana citrus industry in 2019 involved growers in 25 parishes harvesting a total of 635 acres. The citrus industry primarily consists of navels and satsumas, with satsumas representing 78% of all citrus acres. In 2019, the breakdown of acreage was 72 in navel production, 496 in satsuma production and 66 in other types of citrus (lemons, grapefruits and kumquats among others). Total citrus acres in 2019 were down from 885 acres in 2018. Struggles with diseases and pests, such as citrus canker, citrus greening and the Asian citrus psyllid, over the last several years has been one of the main reasons for the downsizing of the citrus industry.

Total navel production was 18,470 bushels in 2019 with a total farm gate value of \$738,800. Satsuma production totaled 185,237 bushels in 2019, generating a total farm gate value of \$6.5 million. Other citrus production was estimated at 14,504 bushels in 2019 with a total farm gate value of \$551,133. When combined, the total gross farm value of the citrus industry in 2019 is estimated at \$7.8 million, down from \$9.6 million in 2018.

Mayhaws

The gross farm value for mayhaws was \$1.25 million in 2019 as compared to \$1.36 million in 2018. Orchard and native mayhaw trees produced approximately 103,659 and 437,273 pounds, respectively, for a total production in 2019 of 540,932 pounds, down from 588,752 pounds in 2018. Production occurred on 239 acres statewide in 2019 and averaged 2,260 pounds per acre.

Plant Enterprises

Muscadines

Reports concerning muscadine production were divided into fresh fruit production and commercial production. The total gross farm value of all muscadine production in 2019 was \$1.3 million. Muscadines were grown for fresh fruit on 59 acres by 36 growers who produced 77,841 gallons of grapes in Louisiana during 2019. The fruit usually was sold at \$4 to \$10 per gallon, with an average of \$8 per gallon. The lower prices generally were used at U-pick operations.

Production for juice and wine was considered commercial muscadine production. Muscadines grown for wine production produced 3,951 tons of commercial muscadines on 420 acres in 2019.

Peaches

Gross farm value of peaches during 2019 was \$794,846, down from \$1.4 million in 2018. Peaches were grown on 225 acres by 43 commercial producers and yielded 18,925 bushels during 2019.

Strawberries

In 2018, the Louisiana strawberry industry involved 47 commercial growers who produced berries on 212 acres for a gross farm value of \$8.4 million. Despite lower acreage and slightly lower prices in 2019, higher yields helped to minimize the reduction in gross farm value generated in 2019. Gross farm value was estimated at \$8.4 million, down less than \$300,000 from the \$8.7 million generated in 2018. Tangipahoa Parish continues to be the leading strawberry producing parish, with 75% of the total acres in the state and accounting for 79% of the state's total gross farm value.

The majority of the Louisiana strawberries were sold commercially. Growers delivered berries to grocery store warehouses, individual grocery stores and fruit stands. The remaining portion of the crop was sold at farmers markets and roadside stands. Louisiana strawberries are generally available as early as November, December and January. These early berries often bring premium prices and play a large part in the high returns for the crop in Louisiana.

Miscellaneous Fruit

A variety of other fruits is planted in Louisiana as small commercial plantings or as backyard plantings. These crops include figs and pears, among others. In 2019, the combined acreage of figs and pears was 105 acres and had a gross farm value of over \$777,000.

Commercial Greenhouse Vegetables

During 2019, 17 parishes had farms commercially growing greenhouse vegetables in 140,471 square feet of greenhouse space, down from 146,671 square feet in 2018. Greenhouse production primarily consists of tomatoes followed by lettuce. All of the greenhouse produce was sold on the fresh market, much of it directly to retail at local markets.

The estimated gross farm value of Louisiana greenhouse vegetables was \$1.89 million in 2019, down from \$1.99 million in 2018. Total value of greenhouse produce, including value-added activities, was \$2.55 million for 2019, a decrease of roughly \$127,000 from the \$2.68 million in 2018.

Hay Sold

Hay production for commercial sales is a limited part of the total hay production in Louisiana. Nevertheless, hay produced from 185 acres of alfalfa and 377,652 acres of grasslands was sold by 3,370 producers in 2019. Yields averaged 2.8 tons per acre from the grasslands harvested for sale and 5.6 tons per acre from the alfalfa harvested for sale. Production included 1.05 million tons of grass hay and 1,037 tons of alfalfa hay. Compared to numbers reported in 2018, the acreage of grasslands used for commercial hay production increased by 3.6%.

Weather conditions were more conducive for hay production in 2019 versus the previous year as indicated by an increase in harvested acres and an increase in average production per acre. While conditions were better, there were still times of excessive rains that delayed harvest, reducing both quantity and quality of hay produced. Gross farm value of all

Plant Enterprises

hay sales, including some minor alfalfa production, was \$125.3 million, which was an increase of nearly 15% from the 2018 value of \$109.1 million. Higher harvested acres, higher yields and a slightly higher average price for grass hay all helped to push gross farm values higher in 2019.

Home Vegetable Gardens

The number of home gardens in any given year fluctuates greatly with people's interest and the economy. When economic conditions are weak, the number of households using home gardens tends to increase. Vegetable gardening is not only a hobby but also extends the family budget by freeing up limited funds for other food purchases. Research conducted by the U.S. Department of Agriculture indicated approximately one in three households have some kind of garden, including backyard fruit trees, vegetable plots, berry patches, etc.

With this assumption of a garden for one in every three households, a methodology based on parish population data was developed to estimate the number of gardens in each parish of the state. Based on these calculations, the number of home gardens in Louisiana is estimated at 625,800 for 2019. The average value of the home garden was estimated at \$534 for 2019. The basis of this value was a 2008 survey conducted by the vegetable industry that indicated that the average garden produced commodities valued at roughly \$525 per garden. This value is updated each year based on the year-to-year price change experienced in a mix of vegetable and fruits that are typically produced in Louisiana. Given these assumptions, the 2019 gross farm value of home vegetable gardens is estimated to be \$334.8 million.

Nursery Crops

The commercial nursery industry in Louisiana consists of fruit and nut tree nursery stock production, foliage plants, woody ornamentals (trees and shrubs) and floriculture bedding plants. Commercial nursery crop production in Louisiana had a gross farm value of \$115.2 million in 2019 compared to \$110.3 million in 2018. Wholesale nursery sales in Louisiana have improved over the past several years. Increases in demand were experienced in 2017 as consumers began to re-plant in response to plant loss caused by two major floods and an extremely rainy growing season in 2016. A continuation of that demand, along with improvements experienced in the overall economy, continued to lead to strong demand again in 2019.

Wholesale production was \$6.51 million for the growers of fruit and nut tree nursery stock in 2019. This category, consisting of citrus, blueberries and figs, among others. Bedding plant and floriculture crop production was \$43.02 million in farm gate sales in 2019. The largest segment of the nursery industry continues to be woody ornamentals, primarily trees and shrubs. At the wholesale level, woody ornamental growers sold products worth \$62.54 million during 2019. Wholesale production of foliage plants increased somewhat from 2018 and accounted for \$3.14 million in sales in 2019. Including value added of \$63.36 million, the total value of the Louisiana nursery industry at the wholesale level was \$178.57 million in 2019.

Peanuts

In 2019, 2,466 acres of peanuts were harvested, compared to 1,863 acres in 2018. Yields averaged 4,996 pounds per acre, slightly higher than average yield in 2018 of 4,803 pounds per acre. These yields are reflective of a good growing season during both years. Gross farm value in 2019 was estimated at \$3.33 million, up from \$2.06 million in 2018. Higher acreage yields and commodity prices all contributed to the higher gross farm value experienced in 2019.

Pecans

The 2019 pecan crop was estimated at 6.76 million pounds, down from the 7.72 million pounds estimated in 2018. The 2019 crop is estimated to consist of 3.59 million pounds of improved pecans and 3.16 million pounds of native pecans. Native trees accounted for the majority (79%) of the production in the Louisiana from 2006-2015. However, native production was not as dominant this year, accounting for only about 53% of total production in 2019. Wholesale prices in 2019 in Louisiana were generally stable to slightly higher than the previous year as lower supplies helped to moderately support prices.

Plant Enterprises

Commercial pecan production contributes substantially to the agricultural economy of Louisiana. The total gross farm value was estimated at \$8.82 million in 2019. When value-added activities are considered, the total economic impact was estimated at \$11.2 million. The majority of the improved orchards are located in the central and northern parts of the state, with native trees dominating production in southern Louisiana. Only Texas, Oklahoma and Louisiana have large areas of natives, while smaller areas are reported for five other states. Generally, over one-half of the improved variety acreage in Louisiana is managed to control diseases, insect pests and weeds.

Rice

Louisiana planted over 415,000 acres in 2019. The Rice Variety by Parish Survey conducted annually by extension agents indicated that Louisiana planted approximately 87% long grain, 12% medium grain and 1% special purpose rice varieties. The top planted rice varieties and hybrids included CL153 (14.8%), CL111 (12.5%), Cheniere (12.3%), Jupiter (9.7%), Mermentau (9.2%), CLXL745 (8.8%), XP753 (6.7%) and PVL01 (5.2%). Clearfield seed technology in both inbred and hybrid rice varieties made up approximately 51% of the acres. The Provisia herbicide technology was planted on 5.2% of the total acreage.

There are many factors that contributed to the poor rice yields in 2019. In fact, you could say that there were poor growing conditions from the end of the 2018 season. After harvest in 2018 the ground remained saturated and cultivation and land preparation for the 2019 season could not be done and most of the seedbed preparation occurred just prior to planting. Planting began in earnest the third week of March when the soils dried, and we had approximately a two-week window in which drill planting occurred. The bulk of the rice was planted in this window. On April 4, the first of a handful of rainstorms brought excessive rainfall to the region, which overtopped young and emerging rice.

Rice emergence and development was slow and uneven due to the cold wet soils. Rice fields throughout the region had spotty stands, and it was common to see three-leaf rice and rice just emerging from the ground. While this does not seem that bad, it does make agronomic decisions difficult. Proper herbicide application, flood establishment, nitrogen application and other decisions are dependent on the proper rice growth stage and can negatively affect yield at the end of the season.

Once most rice was fertilized and flooded, another large rainfall event occurred and flooded (overtopped) several rice fields. Only a few acres were completely lost due to the flooding; however, a lot of the rice in the region was once again stressed while submerged. Some growers also opted to not apply more nitrogen fertilizer after draining their fields to allow the rice to recover. It is critical to maintain the flood immediately after fertilizing and flooding rice for three weeks after application to allow the rice to take that nitrogen up and be utilized. If a field is drained and oxygen is reintroduced to the system, the ammonium nitrogen can be converted to nitrate nitrogen, which will be lost after reflooding the rice. Therefore, it is critical to apply more nitrogen if this occurs.

One of the biggest things that reduced yield in 2019 was Hurricane Barry, which made landfall on July 11. Pre-landfall predictions had rainfall estimates of over 25 inches. Most of the rice in southwest Louisiana received much less rain than that. Because most of the rice was in the early stages of heading, flooding at that point could have been a major disaster to Louisiana rice. However, Barry did bring with it rain and a lot of wind. A good portion of the rice in the region was flowering at the time Barry made landfall. Rain and wind can disrupt flowering and cause the grain to blank. Because Barry was a slow-moving storm, we had several days where pollination was disrupted and yield was lost. The blanked grain was also a vector for increased disease pressure later in the season.

Black kernel and false smuts were excessive in southwest Louisiana. In some cases, trucks containing excessive levels of smut were turned around at multiple grain facilities. Historically, smuts have not been prevalent in southwest Louisiana, and preventative applications of propiconazole fungicides at the 2- to 4-inch panicle in the boot growth stage are rarely used. Due to the epidemic levels of the smuts in 2019, more applications will need to be applied in the future if we want to properly manage smuts.

In 2019, the statewide rice average yield was 6,187 pounds per acre (38.2 barrels or 137.5 bushels per acre), down from 7,211 in 2018. A total of 25.189 million hundredweight of rice was produced on 407,130 harvested acres in 2019. The gross farm value in 2019 for rice produced was \$294.7 million in 2019, down from \$379.6 million in 2018. When value-added activities of \$98.1 million are considered, the total economic impact of the rice industry was \$392.8 million in 2019, down from \$506 million in 2018.

Plant Enterprises

Sod and Turfgrass Production

During 2019, sod was produced by 15 Louisiana sod farmers on 3,475 acres of fine turfgrasses, compared with 18 sod producers farming 3,886 acres in 2018, a reduction of just less than 400 acres. About 60% of the sod acreage in Louisiana is centipedegrass and about one-third is St. Augustinegrass. The remaining acreage is divided among hybrid bermudagrass and zoysia. Zoysia demand has steadily increased over the last several years. Shipping costs are always a major component in the eventual price of sod. Fuel costs remained relatively steady to slightly lower in 2019 compared to 2018. Overall profit margins continued to be strong for the industry for the year. Out-of-state sod farms are always a major competitor for our Louisiana producers, especially in the southern Louisiana market.

Gross farm value of sod and turfgrass sales in 2019 was estimated to be \$27.3 million, down from the \$30.4 million in 2018. Value added for turfgrass production was \$20.5 million, so the total value of sod and turfgrass production in Louisiana during 2019 was \$47.7 million.

Soybeans

In 2019, only 888,387 acres of soybeans were planted, down from 1.3 million in the previous year. Excessive rain and flooding throughout much of the spring and early summer prevented a large number of acres from being planted. Of the acres planted, continued weather disruptions and difficulties through much of the growing season resulted in only 862,796 acres being harvested, with an average yield of 48 bushels per acre. This compares to nearly 1.2 million acres being harvested in 2018 with an average yield of nearly 56 bushels per acre. With the much lower acreage and lower yields, gross farm value in 2019 was estimated at \$345.5 million, down nearly 43% from the \$606.1 million in 2018.

Sugarcane

In 2019, sugarcane was grown on 482,111 acres in 24 Louisiana parishes. Harvested acres were 440,000 after accounting for seed cane acreage. The 11 operating raw sugar factories in the state processed 13,588,003 tons of cane. In total, the 11 factories produced 1.510 million short tons of sugar (96 degrees pol). The average field yield of cane on harvested acres was 30.9 tons acre. The average sugar recovery was 222 pounds of sugar (96 degrees pol) per ton of cane. The yield of commercially recoverable sugar produced per acre averaged 6,860 pounds. Although the pricing period is not completed for the 2019 crop, the projected average price for raw sugar was estimated at 26 cents per pound. The molasses price was projected to average \$109 per short ton at 79.5 degrees Brix.

The gross farm value of the 2019 sugarcane crop was \$495.4 million for sugar and molasses. The gross farm value reported above represents 60% of the value of the sugar and 50% of the value of molasses produced. The remaining percentages are for raw sugar processing, which amounted to \$338.3 million. Therefore, the total value of the sugarcane crop to Louisiana producers, processors and landlords at the first processing level was \$833.7 million.

Cane yield for the 2019 crop was low. The lower tonnage was likely the result of field damage from a wet 2018 harvest and a cooler than normal spring. The growing season had higher than average rainfall (64.09 inches at the Baton Rouge Metropolitan Airport), but that amount was evenly distributed during the growing season. The first mills began processing cane on Sept. 17, 2019. Recoverable sugar per ton of cane was moderately low because of subfreezing temperatures on Nov. 13, 2019. The last mill finished processing sugarcane on Jan. 3, 2020.

The 2019 sugarcane variety census showed that the most widely grown variety for Louisiana producers was L 01-299, which was grown on 56% of the state's acreage. HoCP 96-540 occupied 15% of the acreage. This was followed by L 01-283 (14%) and HoCP 04-838 (4%). Two new sugarcane varieties, L 12-201 and Ho 12-615, were released to sugarcane growers for commercial production in 2019.

Sweet Potatoes

Louisiana sweet potato acreage decreased slightly in 2019. Producers harvested 7,240 acres in 2019 compared to 7,682 acres in 2018. Prior to 2018, Louisiana acreage had remained steady, in the 9,000-acre range. Louisiana remains fourth in sweet potato production acreage in the United States behind North Carolina, Mississippi and California.

Plant Enterprises

Weather conditions made production challenging for much of the growing season and contributed to slightly lower yields in 2019. Average yields were estimated at 466 bushels per acre, down from 491 estimated in 2018. While slightly lower in 2019, yields still remain on a long-term upward trend. Research advances on production practices, fertility, and new and improved varieties are some of the reasons yields are trending upward.

A large percentage of the Louisiana sweet potato crop is marketed to the processing sector for sweet potato fries and other products. Some producers are marketing their entire production acreage under field run contracts, while others are maintaining markets in fresh and processing venues. Production and packing costs for sweet potatoes in Louisiana are estimated to be in the \$4,000-\$4,600 range per acre. Cost of production for potatoes grown for the processing sector utilizing a bulk harvester is estimated at \$2,300 per acre before storage cost are incurred.

Price estimates for the 2019 season were \$17 for a 40-pound box of U.S. No. 1s, \$9 for U.S. No. 2s and \$9 for jumbos. Frozen processor price received to the grower ranged from \$16-24 per hundredweight(cwt). Virtually no canner grade markets were available to Louisiana producers. If this market was available price would be \$6 cwt.

Louisiana currently produces three major varieties of sweet potato. They are Beauregard, Orleans and Bayou Belle. Orleans performed consistently better than Beauregard in commercial fields and research trials in most locations. Orleans is expected to continue to displace Beauregard acreage over the next few years. This variety is suitable for both fresh and frozen processor venues.

Sweet potatoes are marketed year-round. Producers, shippers and brokers are interested in maintaining a year-round supply to meet the consumer needs. In addition to the fresh market demand, there has been an increase in demand for consumer-friendly sweet potato products, such as sweet potato fries, canned sweet potatoes, sweet potato chips, cookies, pet food and juice extracts. Growth in value added use and markets for producers is expected to increase the demand for sweet potatoes. The growth is expected to result in acreage increases in the sweet potato production areas of the southeastern United States.

Louisiana's total gross farm gate value for sweet potatoes in 2019 is estimated at \$47.16 million, compared to \$53.99 in 2018. Total value of sweet potato production, including value added of \$35.37 million, was \$82.52 million.

Vegetables, Commercial

Louisiana vegetable producers grow a wide variety of vegetable crops, generally on smaller acreage farms. Although the majority of farms produce crops on 1 to 5 acres, there are a few farms producing vegetables on more than 60 acres. Most vegetable producers grow anywhere from one to 30 different types of vegetables. This diversity in crops is because most Louisiana vegetables are sold directly to the consumer. Consumers prefer having options when purchasing from farmers markets and community supported agriculture (CSA) operations. A few producers sell corn and melons on the wholesale market. In an effort to assist producers in increasing production efficiency and profitability, the LSU AgCenter partners with the Louisiana Fruit and Vegetable Growers Association in hosting an annual producer field day. Additionally, the LSU AgCenter provides copies of the Southeastern U.S. Vegetable Crop Handbook to our commercial producers at the annual field day. The LSU AgCenter also conducts several annual variety trials helping producers make smart choices in vegetable selection.

In 2019, over 30 vegetables crops were produced in 51 parishes. The top three producing parishes were Tangipahoa Parish, with an estimated \$7.4 million gross farm value; Washington Parish, with an estimated gross farm value of \$5 million; and West Feliciana Parish, with an estimated gross farm value of \$3.3 million. In terms of gross farm value, the top three vegetable crops in Louisiana for 2019 were tomatoes (\$11.2 million), watermelon (\$10.2 million) and southern peas (\$4.1 million). Other vegetable crops that had significant farm gate values in 2019 were bell peppers (\$2.6 million), mustard (\$3.2 million) and okra (\$2.5 million). The gross farm value of all commercial vegetable sales in the state were \$52.8 million in 2019.

Wheat

After several years of declining acreage, wheat planted acres increased in 2019 to over 14,000 acres. This compares to 8,951 acres planted in 2018. More favorable weather conditions at planting allowed acres to return to the levels that were seen in 2017 and 2016. While acres did increase, they are still far below the 100,000 to 200,000 acres that were typical in

Plant Enterprises

2010 through 2015. Despite the higher planted acreage, the excessive rains and wet conditions that impacted most of the spring-planted crops also likely impacted overall productivity. More than 1,300 acres were not harvested, primarily due to weather related impacts. Of the 12,700 acres that were harvested, the average yield was estimated at 54.9 bushels per acre, down from 62.1 bushels in the previous year. With the larger harvested acres, gross farm value increased in 2019 to \$3.3 million from \$2.6 million in 2018. This was despite the lower yields and prices that continued to trend sideways to downward.

2019 Progress Report

Prices of Commodity Products

The gross form value of the commodities reported in the parish tables was computed based upon estimated annual per-unit prices. The state average prices listed below were used for most parishes for most commodities. However, a parish price was used if the parish price was significantly different from the state price.
