## Opening Remarks

April's aggregate housing data was tepid on a monthly basis; yet, on yearly comparison all data are strong to robust with the exception being existing sales. Total housing starts and permits, and new singlefamily sales declined on a month-over-month basis; yet, were robust on a yearly basis. New single-family construction spending indicated no change on a monthly basis. Regionally, data were mixed across all sectors. The June 8th Atlanta Fed GDPNow ${ }^{\mathrm{TM}}$ residential investment spending model projects an aggregate $1.4 \%$ for Quarter Two 2018. New private permanent site expenditures were projected for a $0.2 \%$ decline; the improvement spending forecast was a $4.5 \%$ increase; and the manufactured $/$ mobile housing projection was a $-19.4 \%$ decline (all: quarterly $\log$ change and seasonally adjusted annual rate). ${ }^{1}$
"We remain confident that, despite a first quarter hiccup, economic growth will pick up through the rest of 2018. There are signs that consumer spending is poised to strengthen in the months ahead, and we believe recent fiscal policy actions are likely to contribute to growth this year. Come 2019, however, we expect the fiscal boost to fade, and we adjusted our forecast lower accordingly. We also note mounting downside risks to our projections, including growth-constraining protectionist trade policies and rising oil prices, among others. Meanwhile, housing's upward grind should continue, despite a lackluster first quarter. We expect home sales to post modest gains both this year and next, as prices rise and affordability declines amid low for-sale inventory." ${ }^{2}$ - Doug Duncan, Chief Economist, Fannie Mae

This month's commentary also contains applicable housing data, home ownership, building p roducts, and economic information. Section I contains data and commentary and Section II includes Federal Reserve analysis, private indicators, and demographic and economic commentary.

## April 2018 Housing Scorecard

|  | $\mathbf{M} / \mathbf{M}$ |  | Y/Y |  |
| :--- | :---: | :---: | :---: | :---: |
| Housing Starts | $\nabla$ | $3.7 \%$ | $\Delta$ | $10.5 \%$ |
| Single-Family Starts | $\Delta$ | $0.1 \%$ | $\Delta$ | $7.2 \%$ |
| Housing Permits | $\nabla$ | $1.8 \%$ | $\Delta$ | $7.7 \%$ |

## New Housing Starts

|  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Total Starts* | SF Starts | MF 2-4 Starts*** | MF $\geq_{\mathbf{5}}$ Starts |
| April | $1,287,000$ | 894,000 | 19,000 | 374,000 |
| March | $1,336,000$ | 893,000 | 15,000 | 428,000 |
| 2017 | $1,165,000$ | 834,000 | 17,000 | 314,000 |
| M/M change | -3.7 | 0.1 | 26.7 | -12.6 |
| Y/Y change | 10.5 | 7.2 | 11.8 | 19.1 |

* All start data are presented at a seasonally adjusted annual rate (SAAR).
** US DOC does not report 2 to 4 multifamily starts directly, this is an estimation ((Total starts - (SF + 5 unit MF)).

## Total Housing Starts

US DOC does not report 2 to 4 multifamily starts directly, this is an estimation: ((Total starts - (SF + 5 unit MF)).

* Percentage of totalstarts.

## New SF Starts

## New SF starts adjusted for the US population

From April 1959 to July 2007, the long-term ratio of new SF starts to the total US non-institutionalized population was 0.0066 ; in April 2017 it was 0.0035 - no change from March (0.0035). The long-term ratio of noninstitutionalized population, aged 20 to 54 is 0.0103 ; in April 2017 was 0.0061 - also no change from March ( 0.0061 ). From a population worldview, construction is less than what is necessary for changes in population (i.e., under-building).

## Total Housing Starts: Six-Month Average

## SF Housing Starts: Six-Month Average

## New Housing Starts by Region

NE = Northeast, MW = Midwest, $\mathrm{S}=$ South, $\mathrm{W}=$ West
US DOC does not report 2 to 4 multi-family completions directly, this is an estimation (Totalcompletions - SF completions).

* Percentage of totalstarts.

## New Housing Starts by Region

| M/M change | -12.0 | -10.1 | -14.8 |
| Y/Y change | 12.0 | 4.4 | 26.9 |

All data are SAAR; $\mathrm{S}=$ South and $\mathrm{W}=$ West.
** US DOC does not report multifamily starts directly, this is an estimation (Total starts - SF starts).

## Total SF Housing Starts by Region

NE = Northeast, MW = Midwest, S = South, W = West
US DOC does not report 2 to 4 multi-family completions directly, this is an estimation (Totalcompletions - SF completions).

* Percentage of totalstarts.

## Nominal \& SAAR SF Starts

## Nominal and Adjusted New SF Monthly Starts

Presented above is nominal (non-adjusted) new SF start data contrasted against SAAR data.
The apparent expansion factor "... is the ratio of the unadjusted number of houses started in the US to the seasonally adjusted number of houses started in the US (i.e., to the sum of the seasonally adjusted values for the four regions)." - U.S. DOC-Construction

## MF Housing Starts by Region

$\mathrm{NE}=$ Northeast, $\mathrm{MW}=$ Midwest, $\mathrm{S}=$ South, $\mathrm{W}=$ West
US DOC does not report 2 to 4 multi-family completions directly, this is an estimation (Totalcompletions - SF completions).

* Percentage of totalstarts.

## SF \& MF Housing Starts (\%)

## Railroad Lumber \& Wood Shipments vs. U.S. SF Housing Starts

## Railroad Lumber \& Wood Shipments vs. U.S. SF Housing Starts: 6-month Offset

In this graph, January 2007 lumber shipments are contrasted with July 2007 SF starts, and continuing through April 2018 SF starts. The purpose is to discover if lumber shipments relate to future single -family starts. Also, it is realized that lumber and wood products are trucked; however, to our knowledge comprehensive trucking data is not available.

## New Housing Permits

|  | Total <br> Permits* | SF <br> Permits | MF 2-4 unit <br> Permits | MF $\geq \mathbf{5}$ unit <br> Permits |

## New SF House Sales

## New SF Sales \$400m houses: 2002 - April 2018

The sales share of $\$ 400$ thousand plus $S F$ houses is presented above ${ }^{1,2}$. Since the beginning of 2012, the upper priced houses have and are garnering a greater percentage of sales. A decreasing spread indicates that morehigh-end luxury homes are being sold. Several reasons are offered by industry analysts; 1) builders can realize a profit on higher priced houses; 2) historically low interest rates have indirectly resulted in increasing house prices; and 3) purchasers of upper end houses fared better financially coming out of the Great Recession.

## New SF House Sales

New SF Sales: < \$ 200m and > \$500m: 2002 to April 2018
The number of < $\$ 200$ thousand plus SF houses has declined dramatically since $2002^{1,2}$. Subsequently, from 2012 onward, the > $\$ 500$ thousand class has soared (on a percentage basis) in contrast to the < $\$ 200 \mathrm{~m}$ class. One of the most oft mentioned reasons for this occurrence is builder margins. Note: Sales values not adjusted for inflation.

## New SF House Sales

New SF Total Sales Percentages
Sales of SF houses in the greater than or equivalent to $\$ 750.000$ category, for the first-time since data reporting - exceeded $10 \%$ of all new SF sales. The question, will this be revised downward in the upcoming months?

## New SF House Sales

## New SF sales adjusted for the US population

From April 1963 to November 2007, the long-term ratio of new house sales to the total US non-institutionalized population was 0.0039 ; in April 2018 it was 0.0026 - no change from March. The non-institutionalized population, aged 20 to 54 long-term ratio is 0.0062 ; in April 2018 it was 0.0045 - a slight decrease from March (0.0046). All are non-adjusted data. From a population viewpoint, construction is less than what is necessary for changes in the population (i.e., under-building).

## Railroad Lumber \& Wood Shipments vs. U.S. SF House Sales

## Railroad Lumber \& Wood Shipments vs. U.S. SF Housing Sales: 1-year Offset

In this graph, January 2007 lumber shipments are contrasted with January 2008 SF sales, and continuing through April 2018. The purpose is to discover if lumber shipments relate to future single-family sales. Also, it is realized that lumber and wood products are trucked; however, to our knowledge comprehensive trucking data is not available.

## Nominal vs. SAAR New SF House Sales

## Nominal and Adjusted NewSF Monthly Sales

Presented above is nominal (non-adjusted) new SF sales data contrasted against SAAR data.
The ap parent expansion factor "...is the ratio of the unadjusted number of houses sold in the US to the seasonally adjusted number of houses sold in the US (i.e., to the sum of the seasonally adjusted values for the four regions)." - U.S. DOC-Construction

* Millions
** The US DOC does not report improvement spending directly, this is a monthly estimation for 2017: ((Total Private Spending - (SF spending + MF spending))
All data are SAARs and reported in nominalUS\$.

## Total Construction Spending (nominal): 1993 - April 2018

Reported in nominalUS\$.
The US DOC does not report improvement spending directly, this is a monthly estimation for 2018.

## Total Construction Spending (adjusted): 1993-2018*

Reported in adjusted US\$: 1993-2017 (adjusted for inflation, BEA Table 1.1.9); *January 2018 to April 2018 reported in nominalUS\$.

## Construction Spending Shares: 1993 to April 2018

Total Residential Spending: 1993 through 2006
SF spending average: $69.2 \%$
MF spending average: $7.5 \%$
Residential remodeling (RR) spending average: 23.3 \% (SAAR).
Note: 1993 to 2016 (adjusted for inflation, BEA Table 1.1.9); April-April 2017 reported in nominal US\$.

## Adjusted Construction Spending: Y/Y Percentage Change, 1993 to April 2018

## Residential Construction Spending: Percentage Change, 1993 to April 2018

Presented above is the percentage change of inflation adjusted $\mathrm{Y} / \mathrm{Y}$ construction spending. All spending measures declined, on a percentage basis, year-over-year.

## Adjusted Construction Spending: Y/Y Percentage Change, 2000 to April 2018

## Total Adjusted Construction Spending: Y/Y Percentage Change, 1993 to April 2018

## Residential Construction Spending: <br> Percentage Change, 1993 to April 2018

Total, MF, and remodeling spending rebounded strongly - however, SF appears to have leveled-off.

## Remodeling

> Metrostudy
> Remodeling Activity, Already a Record-Setter, Will Grow Even More in 2018 , RRI Finds
> Index as of $1 Q 18$ up $5.2 \%$ over year earlier; good times forecast for 2019, too.
"Big-ticket remodeling activity, already enjoying record economic conditions, is growing at its fastest pace in four years and should rise $5.1 \%$ this year alone, Metrostudy said today as it released its latest Residential Remodeling Index (RRI).
The RRI as of the first quarter of 2018 stood as 112.9 , its highest reading ever. That number means the economic conditions known to influence remodeling activity are $12.9 \%$ better than the old peak in early 2007, just before the Great Recession. The RRI has shown year-over-year gains for 24 consecutive quarters, and as of 1 Q 18 it was $5.2 \%$ above the year-earlier level - the highest such annual growth since the first quarter of 2014 - and was $1.4 \%$ better than it was just three months prior.
The index is based on a statistical model that takes into account such data as household level remodeling permits, employment statistics, and a market's economic health. It then uses that model to predict the number and dollar volume of home improvement and replacement projects worth at least $\$ 1,000$.
Metrostudy - a sister company to REMODELING - now predicts the number of remodeling projects worth $\$ 1,000$ and above nationwide will rise $5 \%$ this year to $\$ 12.55$ million, while the value of those projects will climb $6.5 \%$ to $\$ 194.2$ billion. And after the index climbs $5.1 \%$ this year, it should go up another $2.7 \%$ in 2019 , the data operation believes. Actual rates this year will vary among the nation's 381 Metropolitan Statistical Areas, but 370 of them will see growth and the average will be about $4.2 \%$." Craig Webb, Metrostudy

## Remodeling

## Metrostudy

"Remodeling activity is being driven by solid gains in employment and rising home values, factors that are giving homeowners the confidence to invest in their homes. Americans are not only undertaking a greater number of remodeling projects, but larger and more expensive ones. And as a reflection of the long, slow economic expansion that we have been in, many more Americans are just now initiating replacement-type projects that had been deferred during the recovery from the Great Recession. We expect another strong year for the remodeling industry in 2018, and are waiting to see what effect recent tax cuts have on the economy. Early surveys suggest some Americans are increasing their remodeling budgets due to their taxes being lowered." - Mark Boud, Chief Economist,Metrostudy

## Existing House Sales

National Association of Realtors April 2018 sales: 5,460 thousand

|  | Existing <br> Sales* | Median <br> Price | Mean <br> Price | Month's <br> Supply |
| :---: | :---: | :---: | :---: | :---: |

Source: John Burns Real Estate Consulting, LLC, calculation of U.S. Census Bureau 2016 American Community Survey data via IPUMS

## A 5-Year Delay in Homeownership, Other Big Shifts

"Generational definitions of millennial tend to be too broad. As our company's housing demographer, I am responsible for bringing clarity on these categories to our clients. Here are two great charts and five interesting conclusions on household formation and homeownership today." - Chris Porter, Chief Demographer, John Burns Real Estate Consulting, LLC

## Home Ownership

## A 5-Year Delay in Homeownership, Other Big Shifts

- "Household formation rises an average of 5.4\% per year during your 20s. $13 \%$ of 20 -year-olds head a household today, compared to $67 \%$ of 30 -year-olds and $79 \%$ of 36 -year-olds ${ }^{1}$.
- Homeownership rises an average of $\mathbf{3 . 0 \%}$ per year during your 20s. Only $8 \%$ of 20-year-old householders own a home today, compared to $38 \%$ of 30 -year-olds and $52 \%$ of 36-year-olds².
Significant shifts occurred from the peak of the last cycle in 2006 to 2016, the latest available data. Young adults are:
- $\mathbf{5 \%}$ more likely to be living with parents at age $\mathbf{3 6} .15 \%$ of 36 -year-olds live with parents/relatives at age 36, compared to just $10 \%$ of 36 -year-olds ten years prior.
- Forming households two years later. 50\% of young adults now head a home by age 26, compared to $50 \%$ heading a home by age 24 in 2006.
- Buying a home five years later. Homeownership reaches $50 \%$ by age 36 today, compared to $50 \%$ homeownership at age of 31 in 2006." - Chris Porter, Chief Demographer, John Burns Real Estate Consulting, LLC
${ }^{1}$ We consider couples living together to both be heading a home.
${ }^{2}$ The percentage of people owning a home is actually lower, as homeownership rates are the percentage of households who own and not the percent of people who own.

## Home Ownership

Source: John Burns Real Estate Consulting, LLC, calculation of U.S. Census Bureau 2016 American Community Survey data

## Home Ownership

## A 5-Year Delay in Homeownership, Other Big Shifts

"Remember that 2006 had levels of homeownership that may never be achieved again. So what to do with all of this?

- Make better housing demand conclusions. Know the life experiences of your target tenant or buyer. Don't consider all millennials to be the same. The 1990s Connectors born in 1995 owned just over 56,000 homes in 2016, while the 1980s Sharers born in 1985 owned more than 800,000 homes.
- Simplify your decision-making using our 4-5-6 rule.
- 4 disruptors. Government policies, economic cycles, new technologies, and shifts in social acceptability have made dramatic changes to household formation and homeownership. Government policies, new technologies, and societal shifts seem to be changing more rapidly than ever.
- 5 life stages. Each of those disruptors is impacting people differently whether they are young adults, families, or older. The emergence of ride sharing has impacted young adults much differently than families and retirees.
- 6 questions. Use our rule to maximize your revenue by clarifying the who, what, when, where, why, and how you will succeed." - Chris Porter, Chief Demographer, John Burns Real Estate Consulting, LLC

## Home Ownership

## Yielding To Slowing Household Formations

## Experts from Freddie Mac and Metrostudy share insight into household formations.

"For generations, U.S. household formations have followed a distinct timeline: Children move out of parents' homes to go to college, leave college, rent their own place, get married, buy a home, and years later buy a move-up home.

Today, these timelines are changing. New generations are starting households later in life. Leonard Kiefer, deputy chief economist at Freddie Mac, speaks to some of the impediments to household formation in this short video.

## Yielding To Slowing Household Formations

http://www.builderonline.com/ab9f07d9-5b3c-40f3-9b7c-a70259be7021
At the same time that buyers are slowing down their timeline for purchase, builders are slowing down construction. Kiefer attributes that to lack of land and labor, and doesn't see a quick solution for either." - Jennifer Castenson, Director of Thought Leadership Content, Hanley Wood

## Home Ownership

## Yielding To Slowing Household Formations

"Paige Shipp, regional director at Metrostudy, also shows that even as new household formations continue to increase, millennial household formation is slower than previous generations. Why?
"Millennials rent longer than previous generations due to higher levels of debt, and enjoying a renter's lifestyle," Shipp says. "They also are facing the highest rental prices in history, which makes it hard to save for a down payment. And, they were scarred by watching friends and families go through the recession, making them a very pessimistic group. Finally, rapid housing price appreciation has limited the options available for them to move into a first-time product."" - Jennifer Castenson, Director of Thought Leadership Content, Hanley Wood

## Home Ownership

## Yielding To Slowing Household Formations

"Now, not only are millennial emerging as home buyers, but they are also choosing - at staggering rates - to buy new over resale. In this Metrostudy and Neustar chart, the green bars show that millennials are dominating new-home sales, with nearly $52 \%$ of all newhome sales.

As Kiefer points out, there is not a lot of entry-level product for this group to move into, even though the Metrostudy numbers show it's their preference. Kiefer anticipates that the demand will build to a point that builders start to focus on this product in the next three to four years." - Jennifer Castenson, Director of Thought Leadership Content, Hanley Wood

## First-Time Purchasers

## FTB Purchase Loan NMRI: Credit Easing Continues

The First-time Buyer MRI continued to increase. Setting a new series high, FHA's Firsttime Buyer MRI stood at $27.7 \%$ in February, up 2.9 ppts from a year earlier. With individual agencies easing credit standards and continued home price escalation, we expect higher FBMRIs in the coming months.

Note: Includes all types of NMRI purchase loans (primary owner-occupied, second home, and investor loans).
Source: AEI Center on Housing Markets and Finance, www.AEI.org/housing

## AEI International Center on Housing Risk Mortgage Risk Index release of January 2018 data

"First-time buyer (FTB) mortgage risk jumped in February, helping FTB overcome rising prices driven by dwindling inventories of homes for sale. The FTB National Mortgage Risk Index (FBMRI) for February was up .5 ppt from a year ago and up 2.3 ppts from February 2013. Setting a new series high, FHA's First-time Buyer MRI stood at 27.6\% in February, up 2.3 ppts from a year earlier. FHA and Fannie Mae's outsized monthly risk increases are making entry-level homes less affordable, since in a seller's market, prices rise faster than incomes as long as the marginal buyer, who sets the price for all, has access to higher leverage. FTB volume by count also rose $1 \%$ from already elevated levels a year ago." Edward Pinto and Tobias Peter, AEI International Center on Housing Risk

Source: https://www.aei.org/publication/first-time-buyer-indices-update-on-february-2018-data/, 5/29/18

## First-Time Purchasers

## Housing Demand Remains Strong

Agency FTB volume increased 1 percent and 40 percent compared to one and five years ago, respectively. Agency purchase loan volume in February was up 1 percent and 31 percent from a year and five years earlier, respectively. Our prognosis of flat housing demand in 2018 is holding.

Note: The number of agency home purchase mortgages with a government guarantee. November 2017 count is a preliminary estimate. Firsttime buyer volume not available before February 2013.
Source: AEI Center on Housing Markets and Finance, www.AEI.org/housing.

## First-Time Purchasers

## Urban Institute

"In February 2018, the first-time homebuyer share of GSE purchase loans was 48.9 percent, its highest level in recent history. The FHA has always been more focused on first-time homebuyers, with its first-time homebuyer share hovering around 80 percent; it stood at 82.2 percent in February 2018. ... the average first-time homebuyer was more likely than an average repeat buyer to take out a smaller loan and have a lower credit score and higher LTV and DTI, thus requiring a higher interest rate." - Laurie Goodman, et al., Co-director, Housing Finance Policy Center

## Housing Affordability

National Housing Affordability Over Time

| Median housing expenses to income 40\% <br> 35\% <br> 30\% $25 \%$ $20 \%$ $15 \%$ $10 \%$ $5 \%$ <br>  |  |  |
| :---: | :---: | :---: |

|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |

## Urban Institute

"Home prices remain affordable by historic standards, despite increases over the last five years and the recent interest rate hikes. As of March 2018, the share of median income needed for the monthly mortgage payment with a $20 \%$ down payment stood at 22 percent. With a $3.5 \%$ down payment, the share of income is higher, at 26 percent in March 2018. If interest rates rise to $5.5 \%$, the housing expenses to income share with both a 20 percent and a 3.5 percent down payment would be equivalent to the 2001-03 averages (24 and 28 percent, respectively). ... ." - Bing Lai, Research Associate, Housing Finance Policy Center

## Housing Affordability

## Affordability Worsens in a Seller's Market

Nominal Price-to-Income Ratio* has retraced more than half of the drop from the 2006 peak to the 2012 trough. Combination of a highly accommodative monetary policy and easier lending promotes further capital flows into real estate, increasing potential for economic damage as highly leveraged lending fuels cyclically volatile housing sector.

Nominal Price-to-Income Ratio*

* Calculated as median house price divided by median household income.

Note: The National Association of Realtors (NAR) defines a seller's market as inventory that is less than or equal to 6 months of sales. NAR data pertain to existing homes; not available before June 1982. Data from the Census Bureau for new home inventories used before June 1982.
Source: Zillow, Census Bureau, and the NAR.

## Mortgage Credit Availability

## Mortgage Credit Availability Unchanged in April

"Mortgage credit availability increased in May according to the Mortgage Credit Availability Index (MCAI), a report from the Mortgage Bankers Association (MBA) which analyzes data fromEllie Mae's AllRegs ${ }^{\circledR}$ Market Clarity ${ }^{\circledR}$ business information tool. The MCAI increased 1.5 percent to 180.6 in May. A decline in the MCAI indicates that lending standards are tightening, while increases in the index are indicative of loosening credit. The index was benchmarked to 100 in March 2012. The Conventional MCAI increased (up 2.0 percent) and the Government MCAI increased (up 1.0 percent). Of the component indices of the Conventional MCAI, the Jumbo MCAI increased by 2.2 percent while the Conforming MCAI increased by 1.9 percent.
The expansion of offerings across all loan types drove credit availability to its highest level in three months. In particular, the conventional index and jumbo index both rose to their highest levels since March 2011. This was mainly caused by increased investor interest in jumbo loans and high balance conforming loans." - Joel Kan, Vice President of Research and Economics, MBA

## Mortgage Credit

## Origination Shares Issuer Lender Type, FHA and RHS Purchase Loans

Similar dramatic market shifts occurred from large banks to nonbanks for both FHA and RHS loans. Today nonbanks account of $80 \%$ of FHA and RHS originations.

FHA Purchase Origination Shares*

RHS Purchase Origination Shares*

*Origination shares do not show shares for State Housing Finance Agencies and Credit Unions which account for about 4\% of the FHA Purchase market and 1\% of the RHS Purchase market.

## United States Housing

## Building Products -- averaging \$80,566 per New Home -- Under Price Pressure

"Curious to look at the math of how $\$ 55$ billion in annual building materials expenses roll up and break down in the new-home market, account for a quarter of a home's price tag, and add up to $\$ 105$ billion in remodeling materials and products each year?

A new Bank of America Merrill Lynch report -- "Who Builds the House-2018" [note, subscriber content] -- subjects both the new residential and remodeling market places to a fascinating market "sizing" research exercise, aggregating and averaging data in such a way as to show a model for materials and products input costs. Although America's thousands of home builders don't buy, build, or model their businesses on averages, estimates, or aggregates, the analysis of 14 major product and materials component groups is helpful in revealing why all the fuss about price inflation pressures as builders work to subtract costs and offer lower-priced home models.

The fascinating snapshot schematic from the report looks like this (following slide):" - John McManus, Editorial and Digital Content Director, Builder, Hanley Wood

## United States Housing

## Building Products -- averaging \$80,566 per New Home -- Under Price Pressure

""We estimate that the value of content in an average US single-family new home has grown at a compounded annual growth rate (CAGR) of 3.6\% from \$23,073 in 1982 to \$80,566 in 2017. Our $\$ 80,566$ estimate includes $\$ 2,047$ of content attributable to an "other" category, which is an aggregate of sundry items outside of the 14 major groups. Materials constitute roughly $25 \%$ of the sale price of a new house, with the 2017 median sale price reaching $\$ 321,000$ according to the US Census Bureau. This foots fairly well with our $\$ 80,566$ content estimate $(\$ 80,566 / 25 \%=\$ 322,264)$.

We estimate an overall opportunity for building products content (excluding labor) in the US new single-family home construction market of roughly $\$ 55 \mathrm{bn}$. We derive our $\$ 55 \mathrm{bn}$ estimate by multiplying the residential new construction exposure of each component group by its total addressable market and aggregating the results. This approach is backstopped by multiplying our estimated dollar content per home of $\$ 80,566$ by 2017 new home sales of $614 K$ and by 2017 single family starts of 851 K , which implies a residential new construction market range of \$49bn-\$69bn."

Further, the report sizes market share for the building products and materials supplier leaders in each of its 14 separate component categories, essentially diagramming market leaders in each part of the a home's construction. All in, the report notes that the top three players in each of the 14 products and materials components of a home, own $60 \%$ or more of the market, and that consolidation continues." - John McManus, Editorial and Digital Content Director, Builder, Hanley Wood

## Building Products -- averaging \$80,566 per New Home -- Under Price Pressure

"Again, nobody builds to an average or aggregate, so for different geographical markets, different square footages, different customer segment specs, different national and local deals and installation nodes, these figures can become far from precise when it comes to applying them to specific projects.
Here's the way the analysis takes on the trajectory of building materials and product input expense as a historical trend:" - John McManus, Editorial and Digital Content Director, Builder, Hanley Wood

## United States Housing

## Building Products -- averaging \$80,566 per New Home -- Under Price Pressure

""'Based on 18 distinct producer price indices (including "other" category), we estimate that the raw material content in an average single-family home increased from roughly $\$ 23,073$ in 1982 (base year, index=100) to $\$ 51,523$ in 2017, representing a CAGR of approximately $2.3 \%$. In addition, the average square footage of floor area in a new single-family home increased at a $1.3 \%$ CAGR from 1,710 to 2,674 over the same period. Given that 1982 was the base year for this analysis, the size impact rose from \$0/home in 1982 to \$29,044/home in 2017. For consistency, we employ the same size factor (current year average square footage/1982 average square footage) for each component group. The sum of the raw material and square footage inputs equate to our total content per home estimate in each year. Therefore, we estimate that total content in an average single-family home increased from $\$ 23,073$ in 1982 to $\$ 80,566$ in 2017."

As the new home unit growth recovery continues through 2018 and into 2019, it's more and more evident that upward pressure on prices of materials, land, and labor -- each hitting home builders' investment and operations structures at different time periods -- are a risk to making money in the business, especially for smaller companies that pay more for capital.
... Looking from the outside in at the data, many conclude that 2018 will be a good year for builders, and lead into another good year in 2019.

Many of those builders, on the inside looking out, might reply: "Define good."" - John McManus, Editorial and Digital Content Director, Builder, Hanley Wood

## Summary

## In summary:

The U.S. housing construction market was robust in April, with the exception of existing house sales). On a monthly basis, April data was lukewarm, New SF starts, permits, and completions were positive on a monthly basis. Regionally, data were mixed across all sectors. Once again, new SF lower-priced tier house sales were less than historical averages. The new SF construction market needs consistent improvement in this category to influence the housing construction market upward.

Housing, in the majority of categories, continues to be substantially less than their historical averages. The new SF housing construction sector is where the majority of value-added forest products are utilized and this housing sector has room for improvement.

## Pros:

1) Historically low interest rates are still in effect, though in aggregate rates are incrementally rising (future Fed actions may cause $i$-rates to rise);
2) As a result, housing affordability is good for many in the U.S. - but not all of the U.S.;
3) Select builders are beginning to focus on entry-level houses.

## Cons:

1) Lot availability and building regulations (according to several sources);
2) Increasing interestrates;
3) Household formations are still lagging historical averages;
4) Changing attitudes towards SF ownership;
5) Job creation is improving and consistent but some economists question the quantity and types of jobs being created;
6) Debt: Corporate, personal, government - United States and globally;
7) Other global uncertainties.
